## GRINDING OF RAW MATERIALS

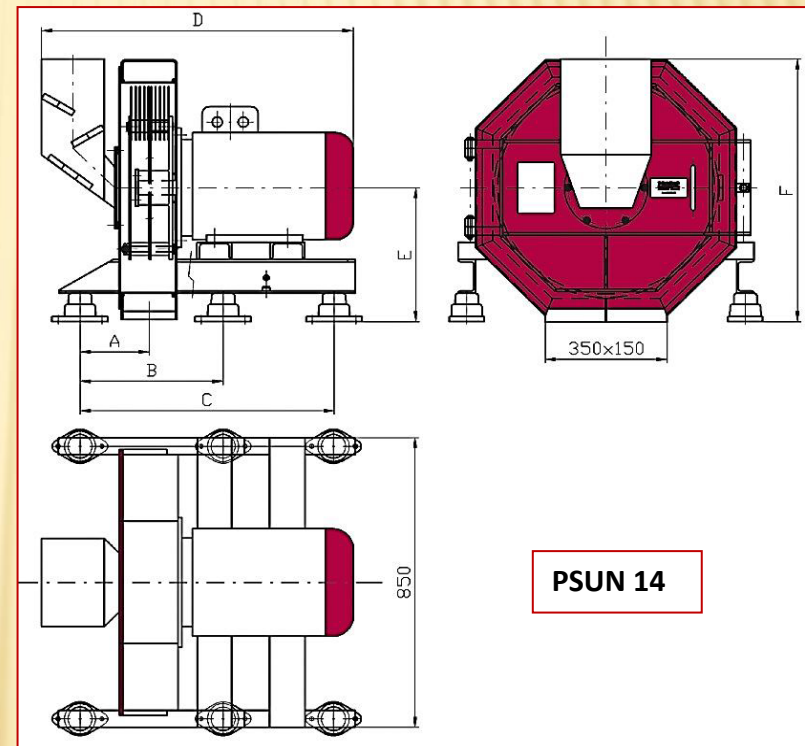

**HAMMER MILL PSUN** are used for grinding of raw materials mainly to feeding purposes. They are mostly cereals (wheat, rye, barley oats), maize, pulses, ground oil cakes and pelleted dried fodder. Processed raw materials are fed through the inlet into the grinding chamber with a rotor with hammers hanged on pins. Due to high speed of the rotor material is forced against the chamber circumference formed by perforated sheet. By impacts of hammers on the sieve material is ground, penetrates the sieve perforation and falls down through the outlet. Ground material quality (granulation) is governed by the size of the sieve perforation.
